Estos pre-códigos, hablando por ejemplo del grupo VW, quiere decir que se deben extraer 7 bytes del CS (Component security), diferente para cada vehículo y llave, extrayendo dicho valor bien desde el Inmovilizador o bien desde la unidad de control (ECU), y programar dichos esos valores sobre el chip. |

Horretarako, hainbat erreminta erabiltzen dituzte: Scanner vía OBDII, eramangarriak... “Aurre-kode” horietatik, VW taldeetakoetan, 7 byte ateratu behar dira CStik (Component security) eta desberdina da ibilgailu eta giltza bakoitzean. Balio hori ateratu behar da, ibilgetzeko gailutik edo kontrol-unitatetik (ECU). Ateratako balioak txipean programatu behar dira.                                                                      |
|                                                                                              | Most new vehicles need a “pre-coded” transponder before being diagnostically programmed using various tools, such as OBD II Scanners, laptops, and so on. The pre-coding of a transponder chip, for example VAG Group vehicles, means an extraction of 7 bytes of CS (Component Security) that is written to the chip. The CS value is unique for each vehicle and key, and depending of the vehicle, is either extracted from the Immobilizer or engine control unit (ECU).                                                                                            |
|                                                                                              | La plupart des nouveaux véhicules ont besoin d’un “pré-codage” du transpondeur OEM, avant la programmation dans les véhicules en utilisant des outils différents, tel que l’ OBD II Scanners, ordinateurs portables, etc.... Ce pré-codage, par exemple concernant les véhicules du Groupe VAG, signifie : extraire 7 octets du CS (component Security), différent pour chaque véhicule et chaque clé, parfois les informations sont prise sur le dispositif antidémarrage ou sur l’unité de commande de moteur (l’ECU) et programmer cette valeur sur la puce.         |
|                                                                                              | Die meisten neuen Fahrzeuge benötigen eine fahrzeugspezifische Vorkodierung der im Markt verfügbaren OEM-Transponder vor dem Anlernen an das Fahrzeug mit ODB-II-Scannern, Laptops o. a. Diese Vorkodierung (z. B. bei der Volkswagen AG) bedeutet, dass sieben (7) Bytes aus Sicherheitskomponenten entnommen werden und somit für jedes Fahrzeug und jeden Schlüssel unterschiedlich sind. Teilweise werden diese Daten aus dem Motorsteuergerät, teilweise aus der Wegfahrsperre kopiert und als Vorkodierung auf den Transponder übertragen.                        |
